QUANTIFIERS

A. Introduction

A **quantifier** is a word that comes before a **noun** (a person, place, or thing). It shows the **quantity** (amount) of that noun.

In the chart below, note that the percentages are only approximate numbers to help you understand the general amounts of each quantifier. Quantifiers have no specific amounts attached to them.

B. Some and Any

Quantifier	Some	Any
Meaning	Think of <i>some</i> as an indefinite number that is about 50% (about half of an amount of a noun). It's not too much and not too little.	The amount associated with <i>any</i> depends on the context. In negative sentences, <i>any</i> usually means none of the noun. In questions, <i>any</i> means some, many, or all of the noun.
When to Use	<ul style="list-style-type: none"> in affirmative (positive) sentences before plural count nouns before non-count nouns <p>Note: There might be an adjective or adverb + adjective phrase between <i>some</i> and the noun, but there is never another article such as <i>a</i> or <i>the</i>.</p>	<ul style="list-style-type: none"> in negative sentences in questions before plural count nouns before non-count nouns
Examples	<ul style="list-style-type: none"> She borrowed some books from the library. Let's watch some old movies this weekend. We made some rice for dinner. The children want some attention. 	<ul style="list-style-type: none"> He doesn't have any free time. They don't want any pizza. Do you have any pets? Does she require any assistance?
Exceptions	<p><i>Some</i> can be used in certain types of questions. It is commonly used in questions that are offers or requests.</p> <ul style="list-style-type: none"> Do you want some more coffee? (<i>offer</i>) Can I get some more fries? (<i>request</i>) 	<p><i>Any</i> can be used in affirmative sentences to emphasize there is no specific noun in the speaker's mind.</p> <ul style="list-style-type: none"> I need a pen. Any pen will do. (<i>I don't care which pen it is.</i>)
	<p><i>Some</i> has many functions in English. Don't get confused by the use of <i>some</i> as a pronoun, as in the example below. If <i>some</i> is not followed by a noun, it is acting as a pronoun and not a quantifier.</p> <ul style="list-style-type: none"> You don't need to stop for milk on your way home. I already bought some. 	<p><i>Any</i> also has many functions in English. Don't get confused by the use of <i>any</i> as a pronoun, as in the example below. If <i>any</i> is not followed by a noun, it is acting as a pronoun and not a quantifier.</p> <ul style="list-style-type: none"> Can you stop for milk on your way home? I didn't have time, so I didn't buy any.
